

LUMI VASALE

980nm Laser Thread Vein Removal

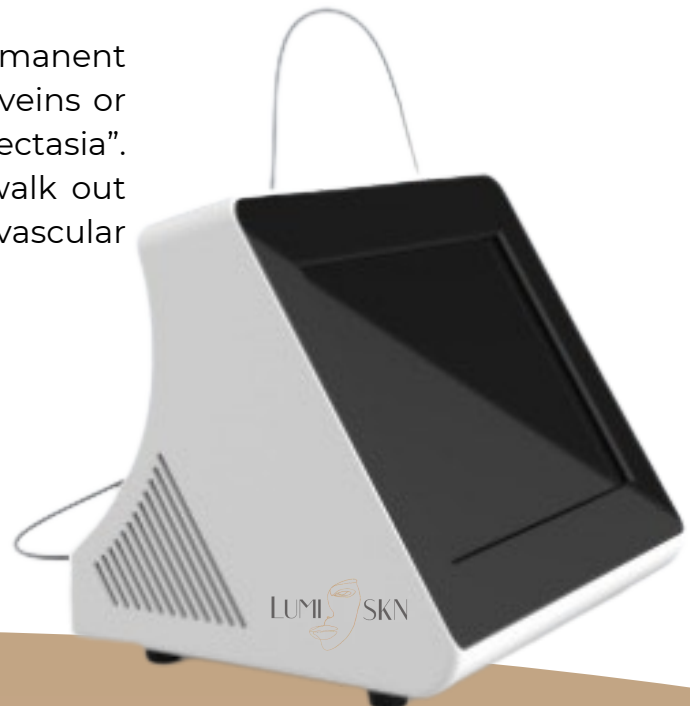

THE LATEST TECHNOLOGY FOR ADVANCED
THREAD VEIN REMOVAL

SUPERIOR DIODE LASER TECHNOLOGY

Utilising sophisticated Diode technology the Lumi Vasale works by applying a narrow 980nm laser beam to target the vein using a precise application. The red blood cells in the thread veins absorb the laser energy, causing the blood within the vein to heat up, damaging the wall of the vein. This reaction causes the thread vein to close down, and when it does, the body absorbs the vein, causing it to disappear.

SAFE & EFFECTIVE TREATMENTS

LumiVASALE offers the instant, safe and permanent treatment for red veins often referred to as thread veins or spider veins and medically referred to as "telangiectasia". LumiVASALE delivers a fast and effective walk in walk out solution for the treatment of red veins and vascular blemishes.

WHY CHOOSE LUMIVASALE
